To whom it may concern,

I am writing to apply for the Chemical Engineering Intern position in Goleta, CA seeking chemical engineers. I believe that my interest in chemical engineering, passion for decarbonizing the future, and quick learning make me an ideal candidate for this position.

Of the many projects I have worked on, the one that most aligns with this position would be my synthesis of liquid bromine from a solution of acids and bromides. Inspired from organic chemistry reactions and online sources, I independently planned, researched, and assembled the process and required components. Working with gasses and extracting the liquid bromine via distillation and the purification from the mixture was a valuable experience that helped me develop skills for handling toxic liquids and gasses, utilizing proper lab PPE, and controlling reaction rates.

I have always had a passion for decarbonizing the future, pushing my family and friends towards clean energy and keeping informed on the latest technologies. When I first learned about C-Zero last year, it was the company that intrigued me the most due to its ability to be adapted to our current infrastructure and its potential to be connected to other clean energy sources for maximum efficiency.

Alongside my interest and skills, I am an avid learner, working great in stimulating environments that teach me new things. I also have plenty of experience working with machines, whether it be simple power tools or lab equipment. Put together, I believe I am a strong candidate for this position, and would be ecstatic to join the team.

Thank you for your consideration.

Sincerely,
Jose Barbeito
