

Example 1. Two fair six-sided dice are rolled and the sum, T , is recorded. What is the probability distribution for T ?

Example 2. Assume that 80% of students entering NCSU will eventually graduate from the university. What is the probability that three of five randomly selected freshmen will eventually graduate?

Example 3. Accidents at an industrial facility occur infrequently, with the probability of an accident on any given day = 0.005.

(a) What is the probability that in a 365 day period there will be 1 accident?

(b) What is the probability that there are at most 2 days with an accident during a 365 day period?
